Professional Summary

Full Stack Developer and Computer Science graduate with hands-on experience designing, developing, testing, deploying, and maintaining scalable web applications using **Java, Spring Boot, React.js, FastAPI, SQL, JavaScript, TypeScript, and AWS**. Experienced in building responsive user interfaces, backend services, RESTful APIs, and database-driven applications while improving application performance, scalability, and maintainability. Strong understanding of Software Development Life Cycle (SDLC), Agile methodologies, debugging, testing, API integration, Git-based version control, CI/CD practices, technical documentation, and cross-functional collaboration to deliver reliable production-ready software solutions.

Technical Skills

Programming Languages: Java, Python, C#, SQL, JavaScript (ES6), TypeScript

Frontend: React.js, HTML5, CSS3, JavaScript, TypeScript, Responsive Web Design

Backend: Spring Boot, FastAPI, RESTful APIs, Microservices, API Integration, .NET Core (Fundamentals), .NET Framework (Fundamentals)

Databases: MySQL, MongoDB, SQL Server (Fundamentals), SQL Query Optimization

Cloud & DevOps: AWS (EC2, S3), Git, Docker, CI/CD

Software Engineering: Object-Oriented Programming (OOP), Data Structures & Algorithms, SDLC, Agile/Scrum, Debugging, Unit Testing, Performance Optimization

Frameworks & Libraries: LangChain, Scikit-learn, Entity Framework (Fundamentals), LINQ (Fundamentals), Dependency Injection (Fundamentals)

Data Analytics: Pandas, Streamlit

Professional Experience

AI Developer Intern

Sept 2025 – Mar 2026

Smartkeen Tech, Bengaluru

- Designed, developed, and maintained scalable backend services and AI-powered web applications using **Python, FastAPI, SQL, and REST APIs**, supporting enterprise analytics and intelligent automation solutions.
- Developed and integrated RESTful APIs with backend services, enabling efficient communication between application components while improving scalability and maintainability.
- Improved backend throughput by **25–30%** and reduced API latency by **20–25%** through SQL query optimization, asynchronous processing, caching strategies, and backend performance tuning.
- Built reusable backend modules and scalable data-processing pipelines, improving application reliability, operational efficiency, and maintainability by **30–40%**.
- Collaborated with cross-functional engineering teams to troubleshoot production issues, debug backend services, optimize application workflows, and support deployment activities throughout the SDLC.
- Contributed to application testing, technical documentation, code reviews, model evaluation, and continuous performance improvements while following Agile development practices and coding standards.

Independent AI Research & Engineering Project

Apr 2025 – Jul 2025

- Designed and developed a scalable AI-powered document intelligence platform for semantic search, knowledge retrieval, and enterprise document processing.
- Built modular backend services and RESTful APIs using **Python, FastAPI, LangChain, and vector databases**, enabling efficient document ingestion, indexing, and retrieval workflows.
- Optimized application performance to achieve **sub-10s inference latency** through asynchronous execution, vector indexing optimization, caching strategies, and backend performance tuning.
- Developed reusable document-processing pipelines and modular application components, improving scalability, maintainability, responsiveness, and system reliability.
- Performed testing, debugging, retrieval-quality evaluation, and performance optimization to improve application reliability and user experience.

- Designed and developed scalable frontend and backend modules using **React.js, TypeScript, JavaScript, REST APIs, and MySQL** for responsive web applications.
- Built and integrated RESTful APIs, enabling seamless communication between frontend components and backend services while improving application scalability, maintainability, and performance.
- Optimized relational database queries and backend workflows to improve application responsiveness, query efficiency, and overall user experience.
- Participated in debugging, testing, API integration, performance optimization, and cross-functional collaboration to deliver reliable software following Agile methodologies.

Projects

DocMind – Generative AI Document Assistant

GitHub ↗

- Designed and developed a scalable AI-powered web application for intelligent document search, semantic retrieval, and knowledge management using modern AI technologies.
- Built modular backend services and RESTful APIs using **FastAPI, LangChain, FAISS, and LLM APIs**, enabling efficient document ingestion, indexing, and retrieval.
- Achieved **sub-2s response latency** through asynchronous execution, vector indexing optimization, caching strategies, and backend performance tuning.

Stress Detection ML System

- Developed a machine learning classification system achieving **85% accuracy** using supervised learning algorithms, feature engineering, and optimized preprocessing techniques.
- Performed data cleaning, feature selection, exploratory data analysis, model training, validation, and performance evaluation to improve prediction accuracy.
- Evaluated multiple machine learning models using standard performance metrics to identify the most effective classification approach.

Incentive Management Application – Client Project

GitHub ↗

- Designed and developed scalable frontend and backend modules using **Java, Spring Boot, React.js, TypeScript, REST APIs, and MySQL** for a production-oriented multi-tier web application.
- Built and integrated RESTful APIs to enable seamless communication between frontend interfaces and backend business services while improving application scalability.
- Optimized database operations, API workflows, and modular business logic to improve application performance, maintainability, and query efficiency.
- Implemented reusable application components following object-oriented design principles and modern software engineering best practices.

Automotive Data Analysis Dashboard

GitHub ↗

- Developed an interactive web-based analytics dashboard using **Python, Pandas, and Streamlit** to transform complex datasets into actionable business insights.
- Performed data cleaning, preprocessing, transformation, and exploratory data analysis to improve reporting accuracy and support data-driven decision-making.
- Built reusable visualization components and reporting dashboards, improving accessibility, analytical efficiency, and user experience.
- Automated data-processing and reporting workflows, improving operational efficiency, consistency, and maintainability.

Education

B.E. in Computer Science and Engineering

2021 – 2025

Bapuji Institute of Engineering and Technology

Achievements

- Winner – Byte Talks Coding Competition
- Winner – Planathon Debate Competition
